Akhilan Vengala

Hyderabad, Telangana | 9182242170 | akhilanvengala9@gmail.com

https://www.linkedin.com/in/akhilanvengala | https://github.com/akhilan9

Summary

Information Technology undergraduate with strong foundations in **AI/ML**, **Cybersecurity**, and **Software Engineering**. Experienced in developing **AI-powered applications** and solving cybersecurity **CTF challenges** involving packet analysis and web security testing. Skilled in **Java**, **Python**, and modern development frameworks with a strong interest in building scalable intelligent systems and solving complex technical problems.

Skills

Languages: Java, Python, C, JavaScript | **AI/ML:** TensorFlow, Keras, Pandas, NumPy, Whisper

Web & Backend: HTML, CSS, Flutter, Node.js, Spring Boot | **Databases:** MySQL, MongoDB, Firebase

Cybersecurity: Wireshark, Burp Suite | **IoT:** Arduino, Raspberry Pi, NodeMCU | **Tools:** Git, Docker

Education

Vignana Bharathi Institute of Technology — Hyderabad, India
Bachelor of Technology in Information Technology - **CGPA: 9.0** — *2023 – Present*

Narayana Junior College — Hyderabad, India
Intermediate Education (MPC) - **Percentage: 93.6%** — *2021 – 2023*

Projects

AI-Powered Multilingual Audio Transcription App | *Python, Streamlit, OpenAI Whisper, FFmpeg*
- Developed a multilingual speech-to-text application using OpenAI Whisper and Streamlit.
- Implemented subtitle generation and export functionality in TXT, PDF, and SRT formats.
- Designed responsive interface for real-time audio transcription workflows.

AI Healthcare Risk Prediction Platform | *Python, Machine Learning*
- Developed a machine learning-based healthcare prediction platform for disease risk analysis.
- Integrated predictive models and data processing pipelines for real-time health assessment.
- Designed scalable architecture supporting multiple disease prediction workflows.

Smart Shopping Cart using IoT and RFID | *Arduino Nano, RFID, Embedded Systems, IoT*
- Developed an IoT-enabled smart shopping cart using RFID technology for automated billing.
- Integrated Arduino Nano, RFID scanner, LCD display, and servo motor for product tracking.
- Implemented real-time item detection and dynamic price calculation for efficient checkout.

Cybersecurity Experience

- Solved CTF challenges involving steganography, cryptography, packet analysis, and web exploitation.
- Performed network traffic analysis using Wireshark and practiced web security testing using Burp Suite.

Achievements

- Secured 1st Prize in Cybersecurity CTF Competition.
- Maintained 9.0 CGPA in B. Tech Information Technology.

Certificates

- Database Management Systems (NPTEL)
- AI & Generative AI Basics (Microsoft)
- Google Crowdsource Hackathon
- Getting Started with AI (IBM SkillsBuild)
- Cybersecurity Hackathon
- Python Full Stack Developer Virtual Internship (AICTE - EduSkills)
